DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 10-14, drawn to an optical deflection device, classified in class 250, subclass 234.
 - II. Claims 6-9, drawn to a control method of an optical deflection surface, classified in class 250, subclass 205.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the method of controlling an optical deflection surface is not limited to only controlling the optical deflection device of the group I invention. The subcombination has separate utility such as in any device where control of the deflection surface is required.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
